Bryan Orlando Guzmán Solis

Tech Lead | Cloud Solutions Engineer | Legacy Modernization · Azure · Quarkus · API Design

orlando.guzman1723@hotmail.com | github.com/orlandomyjourney | linkedin.com/in/orlandomyjourney

PROFESSIONAL SUMMARY

Tech Lead and software engineer with 3+ years of experience in the insurance domain, focused on connecting legacy cores (Progress OpenEdge) to cloud-native, API-led architectures on Azure. Currently leading a connectivity modernization project that combines Azure serverless, Quarkus microservices and MuleSoft API Manager. Strong in system design, resilience patterns (queues, retries, idempotency) and translating business needs into technical designs. Former Microsoft Learn Gold Student Ambassador.

WORK EXPERIENCE

AXA Seguros

Tech Lead – Connectivity Modernization (Project) Jun 2026 – Present

- Lead a team of 9 Java and Progress OpenEdge developers, working with 2 Business Analysts and the Solutions Architect, to expose a legacy insurance core as REST services for quoting, policy issuance and endorsements (≈13K quotes, 1K issuances and 500 endorsements per month).
- Co-designed a four-zone target architecture (**Azure**, **MuleSoft** on Salesforce cloud, Red Hat OpenShift, legacy core) with clear integration rules: every cross-cloud call goes through an API gateway, and one orchestrator per business flow.
- Designed serverless orchestration with **Azure Logic Apps**, **Azure Functions** (Python) and **Service Bus**: queue-based issuance with health-check–driven retries and UUID/VIN idempotency, so transactions survive legacy-core downtime without duplicates.
- Govern the API layer with **MuleSoft API Manager** (API-led: experience / process / system) applying OAuth 2.0 and rate limiting; plan system APIs that wrap SOAP services (Progress 10.2) as REST.
- Build **Quarkus** (Java 21) microservices on OpenShift with a relational data layer on Azure (**PostgreSQL 17** / **Azure SQL**); the first service (product conditions) is completed. CI/CD on Azure DevOps with SonarQube coverage gates.
- Own backlog, estimates and the dev / QA / production roadmap; report weekly progress and risks to leadership and business stakeholders; run weekly code-review sessions and mentor developers on schemas and Swagger contracts.

Software Engineer Jan 2025 – May 2026

- Stabilized critical accounting workflows in the core policy system (Progress OpenEdge), protecting financial data integrity and reducing processing errors.
- Contributed to the design and implementation of scalable solutions for the legacy-to-cloud migration, improving system availability.
- Acted as technical consultant for cross-departmental teams, integrating new features with the core system while ensuring platform compatibility.

IT Business / System Analyst Dec 2023 – Jan 2025

- Led technical teams implementing service connectivity with strategic partners; wrote User Stories, mock-ups and acceptance criteria, and kept requirements traceable across several projects.

NEORIS – *Backend Developer* May 2023 – Dec 2023

- Developed and deployed Java REST APIs consuming SOAP services; coordinated REST implementations with third-party front-end teams and tracked REST/SOAP integrations with external developers.

Microsoft Learn Student Ambassadors – *Volunteer* Mar 2021 – Jan 2024

- Reached Gold Student Ambassador milestone; taught 70+ people to deploy full-stack web apps on Azure and organized tech events (Tech Week UPIITA) with 500+ attendees across 6+ countries.

EDUCATION

UPIITA IPN – Unidad Profesional Interdisciplinaria en Ingeniería y Tecnologías Avanzadas Jan 2023

Bachelor in Telematics GPA 94/100

SKILLS

Cloud & Architecture: Azure (Functions, Logic Apps, Service Bus, Key Vault, Static Web Apps), API-led design, legacy modernization, event-driven and queue-based design, idempotency and resilience patterns
Integration & APIs: MuleSoft API Manager, REST, SOAP, OAuth 2.0, Swagger / OpenAPI
Languages & Frameworks: Java 21 (Quarkus), Python (FastAPI), Progress OpenEdge (ABL), JavaScript / TypeScript, Angular, Node.js / Express, C / C++
Data: PostgreSQL, Azure SQL, SQL, MongoDB
DevOps & Tools: Azure DevOps (CI/CD), SonarQube, Git / GitHub, Docker, OpenShift, Linux / UNIX, Jira
Leadership: Technical leadership, estimation and roadmapping, stakeholder reporting, mentoring, Scrum
Languages: Spanish (native), English (B2)

CERTIFICATIONS, AWARDS & PROJECTS

- Azure Fundamentals (AZ-900); Scrum Fundamentals (SFC), SCRUMStudy; Git and GitHub, Platzi
- Mentor, Talent Hackathon and BBVA Hackathon 2022 (Microsoft track); Speaker, Jalisco Talent Land 2022 (Azure Static Web Apps)
- **UAV with computer vision** (Aug 2022 – Jan 2023): built a custom UAV with an obstacle-detection vision system running on a Raspberry Pi.
